PROFILE

Backend Engineer with nearly four years of experience building Java, Node.js and Python services for connected mobility, real-time geolocation and AI-enabled devices. Hands-on with TCP/UDP device data, event-driven systems, Kafka, Redis, PostgreSQL and Docker. Brings direct telematics experience, production troubleshooting discipline and a strong interest in autonomous-drone logistics.

TECHNICAL STRENGTHS

Languages: Java, JavaScript/Node.js, Python, Go, PHP, SQL

Backend & data: REST APIs, Spring Boot (project experience), Flask, PostgreSQL, MongoDB, Redis

Distributed & device systems: Kafka, event-driven architecture, TCP/UDP protocols, telemetry, geolocation, asynchronous processing

Delivery: Docker, Linux, Git, API integration, production support, technical documentation

PROFESSIONAL EXPERIENCE

Backend Developer | CEiiA

Jul 2025 - Present

Porto, Portugal

- Develop Java backend services that ingest and validate mobility-trip data from ecosystem partners and public-transport sources.
- Contribute to scalable, event-driven processing using Kafka, Redis, PostgreSQL and Docker.
- Build integrations and APIs supporting trip validation, CO2-avoidance accounting and blockchain components.

Backend Developer | Reckon.ai

Aug 2023 - Jun 2025

Porto, Portugal

- Maintained and extended backend services and a back-office platform used to manage AI-enabled retail machines.
- Delivered production features in Node.js and MongoDB, improved service maintainability and started technical documentation for ongoing development.
- Worked across device-adjacent software, APIs and operational workflows in a Docker-based environment.

Software Developer | Gisgeo

Sep 2022 - Jul 2023

Porto, Portugal

- Worked on Java device-server components receiving and decoding real-time geolocation payloads from tracking equipment over TCP/UDP.
- Maintained production Java services, fixed incidents and supported field teams with equipment-related software troubleshooting.
- Helped document legacy and new services and contributed to an initial Python/asyncio migration path.

SELECTED PROJECTS

teltonika-go | Open-source Go telematics library

- Built a Go library that decodes Teltonika GPS data over TCP and UDP, with support for Codec 8, 8 Extended and 16 payloads.

Erasmus Smart Bracelet | International IoT project

- Collaborated with Belgian and Greek students on a fall-detection bracelet and nurse alerting system for patients with multiple sclerosis.

EDUCATION & LANGUAGES

BSc, Computer Engineering - ISPGAYA, 2019 - 2022

Higher Technical Diploma, Networks and Computer Systems - ISPGAYA, 2017 - 2019

Languages: Portuguese (native); English (professional proficiency)
